EXPERIENCE

Software Developer

Nov. 2025 – Present

Computer Security Laboratory (LabSEC), UFSC

Florianopolis, SC, Brazil

- Built and maintained Go **backend services** and Hyperledger Fabric **blockchain infrastructure** for RRDES, the Brazilian Ministry of Education's academic-record traceability network, spanning chaincode, Gateway APIs, XML/XSD ingestion, event consumers, and Python/Bash developer tooling.
- Reduced eligible private histories by **87.5%**, pvtdataStore growth by **66.8%**, and total peer-storage growth by **35.7%** through deterministic key-level purge planning, dry-run/execute tooling, and controlled local-network benchmarks.
- Delivered an end-to-end revoked-diploma workflow across Go APIs, web, formatters, and dedicated Fabric chaincode, validating MEC XML/XSD 1.04/1.05, blocking revoked diplomas at write time, and preserving backward-compatible reads.
- Led the design and implementation of the on-chain consent core and defined an event-driven, privacy-preserving data-sharing flow between institutions using authenticated student/IES context, mTLS transfer, transient fields, destination PDCs, and revocation-driven purge.
- Centralized critical business rules in chaincode and preserved backward-compatible API contracts across these flows, validating delivery with unit/integration tests, local Fabric networks, Postman, Docker, and GitLab CI/CD.

PROJECTS

Nexus Market Observer | *Rust, Tokio, Axum, SQLx, PostgreSQL*

Aug. 2026

- Built a Rust/Tokio **backend data pipeline** for Nexus's Layer 1-native **DEX** using the **official Nexus Exchange SDK**, exposing **5 read-only REST endpoints** and Decimal-safe **trading and liquidity** metrics backed by PostgreSQL.
- Handled distributed-systems failure modes—disconnects, stale data, sequence gaps, and database outages—through explicit lifecycle states, REST resynchronization, durable deduplication, isolated replay/live provenance, and graceful recovery.
- Validated reliability with **41 automated tests**, deterministic and live smoke tests, GitHub Actions CI, multi-stage Docker builds, Prometheus metrics, and a **10-panel Grafana dashboard**.

TrustWork | *Solidity, Foundry, FastAPI, PostgreSQL*

May 2026 – Present

- Built Solidity smart contracts and Foundry tests for a USDC **payment and settlement** escrow covering milestone funding, revisions, disputes, timeouts, cancellation, and pausing, targeting Base Sepolia.
- Enabled wallet-optional **on-chain verification** and explorer-style reads through EIP-4361, EVM JSON-RPC receipts, SHA-256 evidence digests, and an idempotent FastAPI/PostgreSQL event indexer.

FinanceBuddy | *Node.js, NestJS, PostgreSQL, Prisma*

2026

- Built a modular Node.js/NestJS backend for a personal-finance system spanning **5 financial workflows**—cash flow, budgets, savings goals, reports, and investments—using REST API design and a user-scoped PostgreSQL/Prisma model.
- Secured account and portfolio data with short-lived JWT access tokens, rotating HttpOnly refresh cookies, CSRF enforcement, rate limiting, and **4 CI security gates**: dependency audit, Gitleaks, Semgrep, and Trivy.

EDUCATION

Universidade Federal de Santa Catarina (UFSC)

Florianopolis, SC, Brazil

B.S. in Information Systems | Academic Performance Index (2025.2): 9.21/10.0

Mar. 2025 – Expected Jul. 2029

TECHNICAL SKILLS

Programming: Go, Rust, TypeScript, Python, Solidity, SQL, Bash

Backend & Data: Node.js, NestJS, FastAPI, Axum, REST APIs, PostgreSQL, Prisma, SQLx

Blockchain & Infrastructure: Hyperledger Fabric, Fabric Gateway, EVM, JSON-RPC, Foundry, Docker, Docker Compose, Linux, Amazon Web Services (AWS), GitHub Actions, GitLab CI/CD, Prometheus, Grafana

Security: OAuth 2.0/OIDC, JWT, RBAC, TLS/mTLS, X.509, Keycloak

Credentials: AWS Knowledge: Security Champion, Google Cybersecurity Professional, IBM SOC in Practice

Spoken Languages: Portuguese (Native), English (Fluent), Spanish (Intermediate)
